Recent Geometry Set Up at Center Gravity with the following report - 'from our initial inspection the car looked immaculate underneath. It has clearly not seen bad weather and has been well cared for.....from the condition of the nuts/bolts etc it appears that the car has never required alignment work, testament to its great health and originality. We proceeded to remove the ride height and the geometry adjusters with all coming easily undone and in 'as new' condition still in their factory gold colour. To preserve the concourse condition underneath we have applied a clear body wax. In our experience of working on early 911s - this is one of the cleanest we have ever seen'.

G50 POR plate included - a fully provenanced and immaculate example from a fastidious collector. It drives A1 - Very hard to find like this and only getting rarer - and a wonderful enjoyable investment
